Response to Arguments

1. Applicant's arguments with respect to claim 14 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida et al. (US PG-PUB # 20010026112).

[Claim 14]

A photographing device provided with a dust removing mechanism comprising

a photoelectric, conversion element which converts an optical image of an object to an electric signal (a camera as taught in Paragraph 15 has a photoelectric conversion element); an optical element (lens L coupled with a drive member 28 as shown in figure 1) arranged with a predetermined distance from the photoelectric conversion element (there will be some predetermined distance from the photoelectric element); a piezoelectric element (26, figure 1) provided at a peripheral portion of the optical element (piezoelectric element is provided at a peripheral portion of a the lens L coupled to a driving element); a drive circuit (14) which supplies a periodic drive signal to the piezoelectric element (26) to vibrate the piezoelectric element, thereby vibrating the optical element (Paragraphs 50 and 51, figure 4 teaches expansion and contraction frequencies close to resonance frequencies) and a control circuit (controller 22, figure 1) which changes a frequency of the periodic drive signal, to thereby cause the optical

element to be vibrated at a plurality of frequencies close to at least two resonance frequencies different in order and successively applied (Paragraph 82).

Allowable Subject Matter

4. Claims 1, 2 and 13 are allowed.
